

Applying the Update

In order to apply the update, place both (.img) files on a microSD card and insert the microSD card into the AIS5000 itself. Note the update **can not** be carried out from an MFD.

No matter what screen the user is on the AIS5000 will detect the software update and present the user with a confirmation screen.

Once confirmed a new screen is displayed showing the current software versions and the new software versions.

The user should make sure **both** software's have been detected and then click the update button.
